

Most fonts have a particular weight which corresponds to one of the numbers in Common weight name mapping. However some fonts, called variable fonts, can support a range of weights with a more or less fine granularity, and this can give the designer a much closer degree of control over the chosen weight. Most fonts have a particular weight which corresponds to one of the numbers in Common weight name mapping. However some fonts, called variable fonts.

## Carlos Domenje

- ✓ Most fonts have a particular weight which.
- ✓ To one of the numbers in Common weight name.
- ✓ However some fonts, called variable fonts.
- ✓ A range of weights with a more or less fine granularity.
- ✓ This can give the designer a much closer degree.

## Luis Lebus

- ✓ Most fonts have a particular weight which.
- ✓ To one of the numbers in Common weight name.
- ✓ However some fonts, called variable fonts.
- ✓ A range of weights with a more or less fine granularity.
- ✓ This can give the designer a much closer degree.

## Ivan Talijancic

- ✓ Most fonts have a particular weight which.
- ✓ To one of the numbers in Common weight name.
- ✓ However some fonts, called variable fonts.
- ✓ A range of weights with a more or less fine granularity.
- ✓ This can give the designer a much closer degree.
